SUMMARY

I'm a 28-year-old software engineer with a background in MLOps and full-stack development. Passionate about technology and experienced in Python, Kubernetes, backend development and frontend technologies.

WORK EXPERIENCE

Sr. MLOps Engineer - Syneos Health

Jul 2024 - Current

- Refined the Model Inference API deployed on Kubernetes in Azure, achieving a 50% reduction in response time.
- Improved error handling and developed workarounds to mitigate data quality issues.
- Designed and deployed a custom ChatGPT integrated with the inference API to enable users to interact with the model through a chat interface.
- Contributed to the development of AI governance frameworks within the organization.
- Delivered a Clinical Protocol Copilot (FastAPI/Streamlit) utilizing Azure OpenAI and LangChain agents to generate protocol drafts from synopses and enhance existing PDFs, integrating FAISS-based retrieval for accurate, end-to-end clinical-trial Q&A
- Built and automated an end-to-end clinical data integration pipeline on Databricks, connecting internal databases an external clinical data management API. Implemented parallel job orchestration, session management, and Delta Lake-based tracking to automate ingestion, validation, and processing of large-scale data.
- Developed an AI-powered triage assistant to supporting analyst assignment decisions for new clinical projects, deployed through an Azure-based workflow integrating Power Automate, Logic Apps, Azure ML, and Power Apps.

MLOps Engineer - IBM

Jan 2022 - Apr 2024

- Created pipelines in python for the machine learning process and utilized them across multiple environments with a CICD process.
- Enabled the Data Science (DS) team to work efficiently by setting up environments using Kubeflow, a DS platform deployed on a Kubernetes (k8s) cluster.
- Deployed and maintained Kubeflow on Kubernetes.
- Utilized technologies/platforms such as Python, Docker, Kubeflow, Kubernetes (k8s), PostgreSQL, and IBM Cloud.
- Collaborated on the development of a solution gallery for LLM's.
- Developed a shell script to identify and delete unused block storage volumes, saving costs.
- Created Airflow DAGS for ETL's jobs and ML prediction jobs

Software Developer - IBM

Jun 2019 - Dec 2021

- Led the design and development of both front-end and back-end to revamp an old application.
- Technologies used included React with TypeScript for the front-end and Java with Spring Boot for the back-end, along with PostgreSQL databases.
- Started using Python to assist data scientist teammates in building processes required for ML model development, such as data collection and cleansing.

Student Internship - IBM

Jan 2019 - May 2019

- Worked as a full-stack developer intern.
- Gained experience in building enterprise applications using React with TypeScript for the front-end and Java with Spring Boot for microservices in the backend.
- Also involved in Docker and CICD processes during the internship.

EDUCATION

Bachelor of Software Engineering
Instituto Tecnológico de Sonora (ITSON)

Aug 2015 - May 2019

Computer Systems Engineering
Instituto Tecnológico y de Estudios Superiores de Occidente (ITESO)
• Exchange Student Fall 2018 program.

Jan 2018 - Dec 2018

KEY SKILLS

- | | | | |
|--------------|-------------|----------|----------------|
| • Python | • Langchain | • Agile | • Git |
| • MLOps | • SQL | • Devops | • Jira |
| • Java | • Kubeflow | • LLM's | • Data Science |
| • Javascript | • DVC | • GenAI | • Containers |
| • Typescript | • LogDNA | • Bash | • Airflow |
| • React | • Cloud | • Shell | • Azure |

CERTIFICATIONS

- Data Science Professional Certificate
 - Issued Nov 2021 – [Coursera](#)
- IBM Agile Explorer
 - Issued June 2019 – IBM
- All badges:
 - Link to [Credly](#)
